JACK WILLIAMSON

Full-Stack .NET & React Developer | C# | .NET | TypeScript | Azure | Available Immediately

Personal Information

Address: Stansted, Essex (London & Cambridge Commutable / Hybrid / Remote)

Profile

Full-stack Web Developer with 4+ years' experience designing, developing, and maintaining modern web applications using **React, TypeScript, C#, .NET,** and **Azure**. Experienced in owning features end-to-end, from understanding business requirements and designing technical solutions through to implementation and deployment, working closely with product teams to deliver solutions that address business needs. Strong understanding of API design, application architecture, and modern development practices, with a proven ability to collaborate with cross-functional teams, mentor junior developers, and deliver scalable, maintainable software in fast-paced product environments.

Technical Skills

Backend

C#	.NET 8	ASP.NET Core
REST APIs	GraphQL – HotChocolate	EF Core
Dapper	LINQ	Python
SQL – PostgreSQL	Dependency Injection	JWT
CAP	OAuth 2.0	Model Context Protocol (MCP)
Hangfire	xUnit	

Frontend

React	TypeScript	JavaScript
React Router	React Hooks	CSS
Axios	Storybook	Jest

Cloud, DevOps & Tooling

Azure	Terraform	Docker
Airflow	CI/CD	Git

Professional Experience

Software Developer **Jan. 2025 – Present**
Kana Earth, London

- Designed and implemented a **Model Context Protocol (MCP)** server integrated with an existing **.NET API**, secured with an **OAuth 2.0** authentication layer around the existing login journey so **Claude** can securely authenticate and execute application operations using existing user permissions.
- Implemented a native **.NET Hangfire** scheduler to replace an oversized **Apache Airflow** instance used for task scheduling, decommissioning an extra **Azure** service to reduce cloud hosting costs and maintenance overhead.
- Owned end-to-end feature delivery, translating business requirements into technical solutions across frontend, backend, database, and deployment workflows.
- Collaborated with product managers and the wider product team to refine requirements,

produce technical specifications, and estimate implementation effort for new features.
- Designed and implemented reusable frontend and backend patterns to improve consistency and reduce duplicated implementation across applications.
- Contributed to event-driven backend workflows using **CAP** and the transactional outbox pattern with **PostgreSQL**, ensuring reliable asynchronous processing and guaranteed message consistency without external broker overhead.
- Supported deployment and infrastructure management through **CI/CD** pipelines, **Azure** troubleshooting, and **Terraform**-based workflows.
- Troubleshot and resolved production issues under tight time constraints while maintaining application stability and reliability.
- Mentored junior developers through pair programming, code reviews, and guidance on **React**, **TypeScript**, and frontend development best practices.
- Adopted **AI**-assisted engineering workflows using **Codex** and **Claude Code**, supported by repository-level **AGENTS.md / Claude.md** guidance and **Skills**, to accelerate delivery while maintaining consistency across the codebase.

Junior Software Developer **Jul. 2022 – Jan. 2025**
Kana Earth, London

- Led the development of a configurable website using **Umbraco CMS**, delivering an in-house solution in one month as an alternative to a **£90,000** external agency quote.
- Worked as part of the product team to develop authenticated web portals and public-facing applications using **React (TypeScript)** and **ASP.NET Core (C#).**
- Implemented a modular component system using **React components** and **hooks**, supported by **Storybook** documentation and automated **Jest** testing to maintain component reliability and UI consistency.
- Designed and developed **REST** and **GraphQL APIs** implementing **batching, caching,** and **CQRS** to support efficient and scalable application data flows.
- Wrote and maintained versioned **SQL** migration scripts for schema updates and data transformations.
- Participated in code reviews within a **Git**-based development workflow, ensuring code quality, maintainability, and consistency with existing patterns.

Education / Qualifications

B.Sc. (Hons) Computer Science – First Class **Sep. 2020 – Jul. 2023**
The University of Sheffield

A-Levels: Computer Science (A), Mathematics (A), Physics (A) **Sep. 2018 – Jul. 2020**
South Cheshire College, Crewe
